

## **Transplantation in Asia I - Innovative Activities in Organ Transplantation in Asia**

### **How can we publish an article in Transplantation from Asia**

Jeremy CHAPMAN

Transplantation has now been publishing continuously since 1966. It was started as the field of clinical transplantation emerged from the laboratory and from early clinical experiments in transplantation of identical twins and the use of radiotherapy for immunosuppression. In the years that have elapsed it has been joined by 32 journals reported in the field of transplantation by Clarivate when reporting Impact Factors. The journal has a 1 year IF of 6.2 this year – a number which has been rising continuously for the past 5 years.

In order to publish in Transplantation your paper will need to be evaluated by your peers for quality and then by editors for impact and relevance. An IF of 6 means that your article will not only be read by many people but that at least 6 people will cite your article in their own publication during the next year.

In this talk we will review the common errors and the common success factors that lead to publication in the field of Transplantation and in the Transplantation Journal.
