

## **Heart & Lung I - Heart & Lung**

### **Role of bacteriophage in treating resistant infections in lung transplant patients**

Gordon L YUNG

Bacterial infections remain a major problem in the field of lung transplant, from candidate selection to post-transplant patient outcomes. Antibiotic resistance is a major emerging global problem but particularly relevant to lung transplant recipients' care. This lecture will explore the issues surrounding use of phage therapy in the field of lung transplant, with highlights of our experience at University of California San Diego.
